

INTRO/ABSTRACT

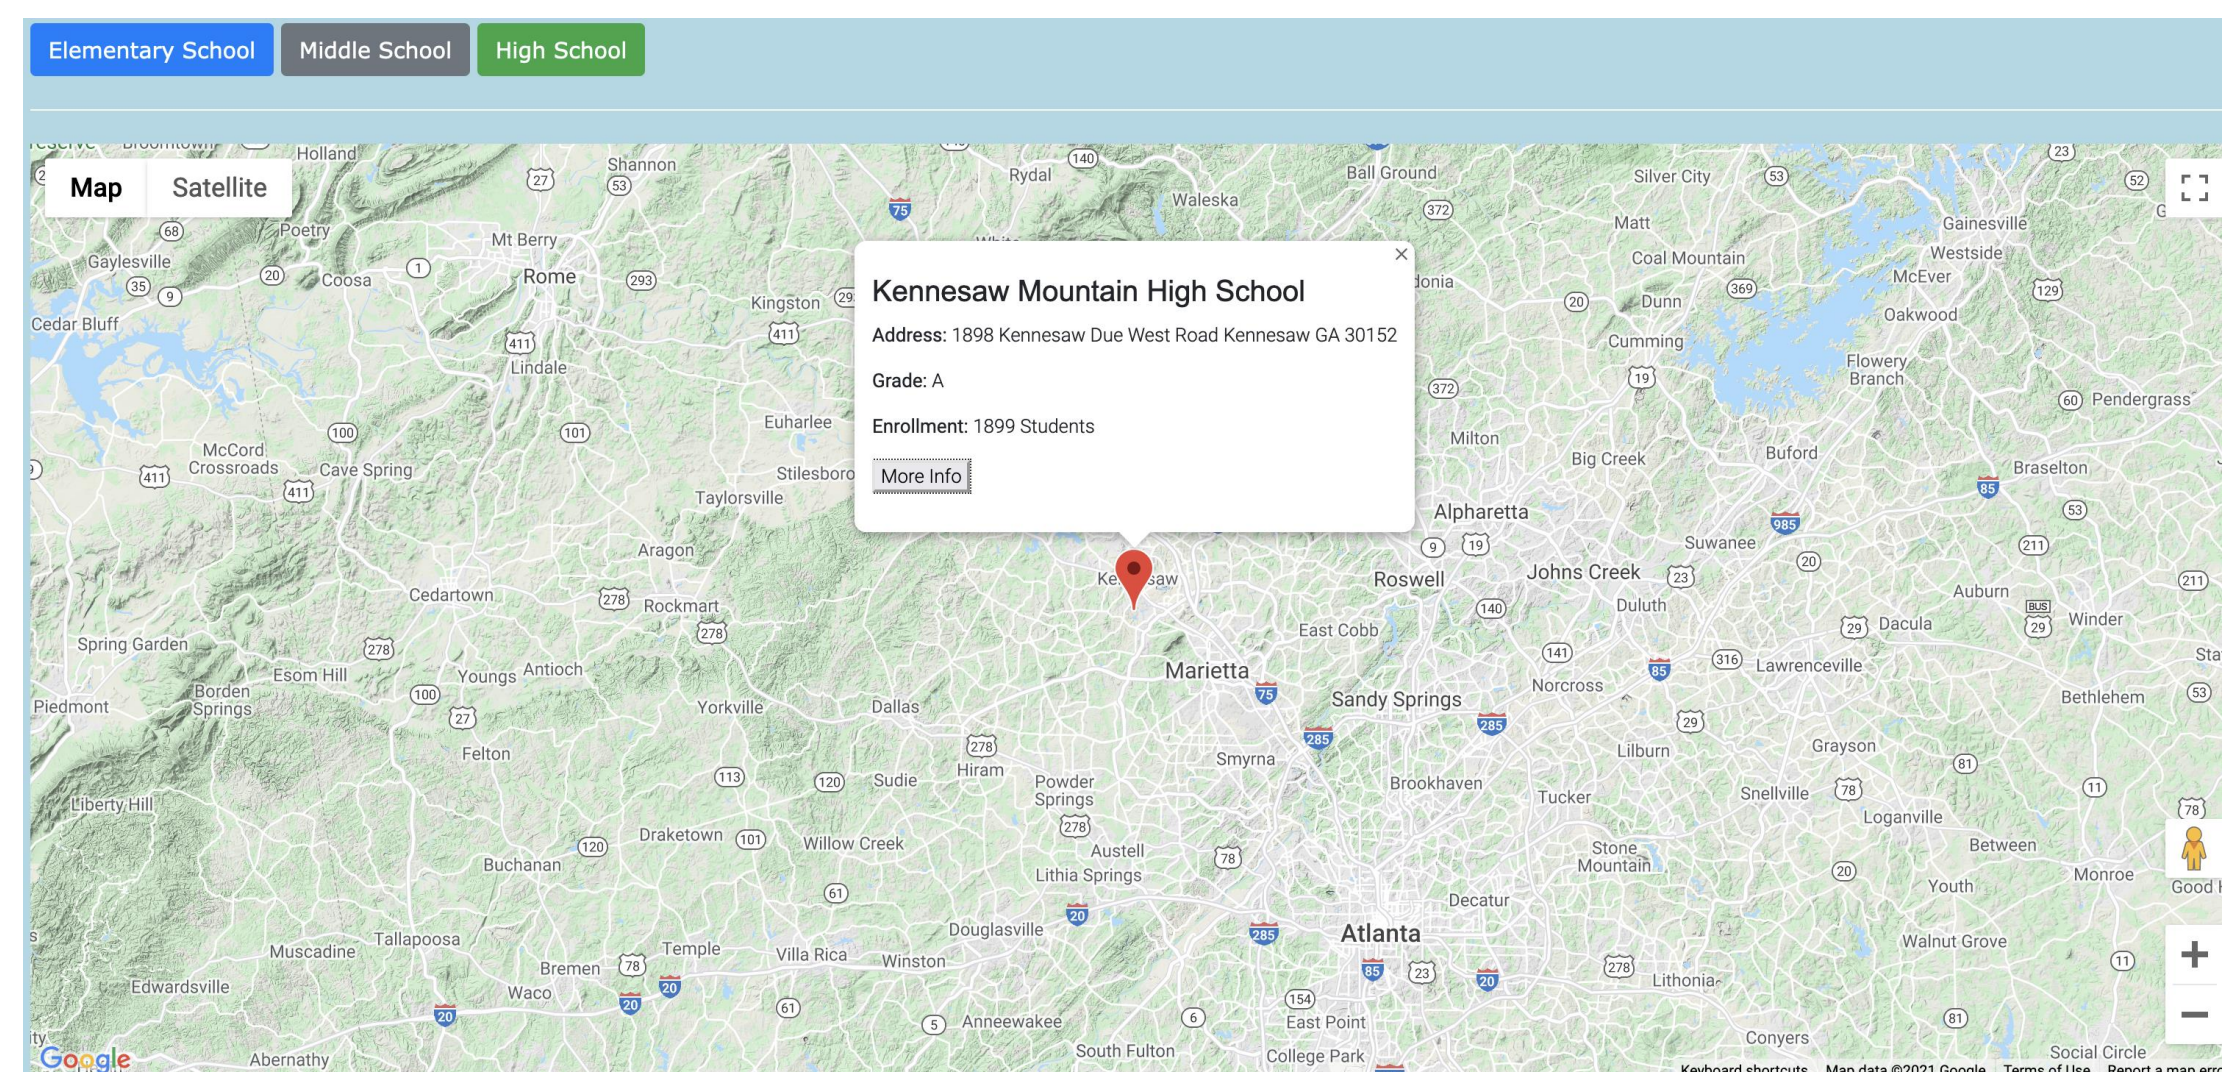

This project serves an interactive website that allows users to select a Georgia school filtered from district to grade level, then automatically navigates to the selected school onto the map. Then the user can click on the marker to display information with a "*more info*" button which redirects users to the Georgia School Grades website to view additional school performance.

METHODS

This website is hosted by Microsoft Azure. We created an API key to utilize Google Maps to initialize a map and to import the 2019 school data from the schoolgrades.georgia.gov website.

RESULTS

Georgia School Grades Map integrates a map to browse school/district and visualize various performance data.
